

Beckman/Hitachi

Beckman Autosampler Products

- Our glass products are borosilicate USP class 1
- Strain point : 535° C
- Please note that some manufacturers refer to 2mL vials as 1.5mL or 1.8mL

Our recommended vials, caps and inserts are specifically designed and made for Spark(Holland) autosamplers, which Beckman (as well as Bruker) is outfitted with.

Beckman autosamplers use a 8mm thread screw vial.

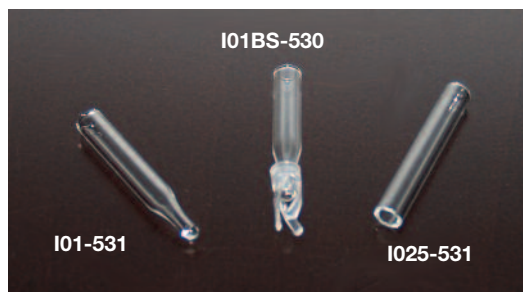

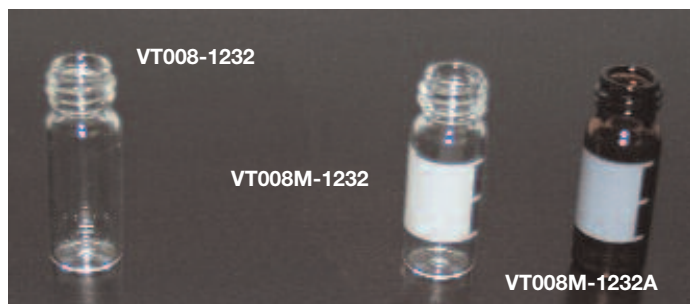

These vials require a 8-425 screw cap, available in various colours for colour-coding of your samples.

For Biopharma applications, we recommend a PTFE/Silicone liner. **Most chemists prefer 10mm Bruker autosampler vials (see page 11). Wide mouth vials (VT010M-1232) and caps w/PTFE septa (C06050BC-10). Also available in a clamshell.**
