

Agilent™ Autosampler Products

- Our glass products are borosilicate USP class 1
- Strain point : 565°C
- Please note that some manufacturers refer to 2mL vials as 1.5mL or 1.8mL

Our recommended vials, caps and inserts are specifically designed and made for Agilent™ (HP) autosamplers. In general, Agilent™ autosamplers use a 9mm thread screw vial (sometimes called ROBO or DP vial).

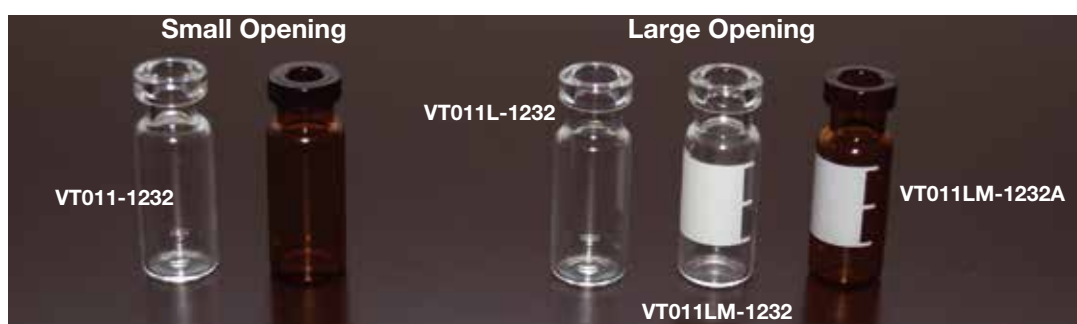

These vials require a 9-425 screw cap, available in various colours for colour-coding of your samples (see pages 5-6). For Biopharma applications, we recommend a PTFE/Silicone liner. Most of Agilent™ GC and some LC applications use 11mm crimp vials with an 11mm aluminum crimp cap available in 5 colours (see page 4). Some chemists prefer a snap vial, which requires a 11mm snap cap. For **snap vials and caps** see page 7-8. For **8mm crimp vials and Headspace vials**, please refer to page 9 and page 25 respectively.

*See page 22 for our QC certified vials.
