**DAICEL REVERSE PHASE HPLC COLUMNS CHIRALPAK® -3R & [-RH]**

**& CHIRALCEL® -R & [-RH]**

For aqueous-organic mobile phase separation or when pH flexibility is required

**NEW** CHIRALPAK® AD-3R, AS-3R, AZ-3R, AY-3R & CHIRALCEL® OD-3R, OJ-3R, OZ-3R are columns packed with Chiral Stationary Phase coated on our new 3 µm silica support for:

- Fast analysis,
- Higher resolution,
- Direct use in most HPLC systems,
- Direct method transfer between 5 µm and 3 µm,
- As always, DAICEL high quality.

CHIRALPAK® -3R & [-RH] & CHIRALCEL® -R & [-RH] have been developed by DAICEL as the reverse phase versions of CHIRALPAK® AD-H, AS-H, AY-H, AZ-H & CHIRALCEL® OD-H, OJ-H, OZ-H (Columns which have the widest applicability in normal phase mode). They have the same coated chiral selector as found in the normal phase stationary phases, but are coated to a hydrophobic high quality silica support.

These reverse-phase columns were developed specifically for aqueous-organic mobile phases. They are suited for applications where the sample is present in aqueous media (e.g. biological samples) or for samples that require flexibility in term of pH range (extreme pH values must be avoided as they can damage the silica gel used in these columns).

These columns are also frequently used in LC/MS applications.

Analytical columns for reverse phase HPLC CHIRALPAK® -3R & [-RH] & CHIRALCEL® -R & [-RH] chromatography columns are available in a variety of diameters and lengths to meet your application needs.

Immobilised chiral phases (CHIRALPAK® IA, CHIRALPAK® IB & CHIRALPAK® IC) show that they are extremely suitable for analytical method development under reverse phase conditions (see column details p. 8). Many RP and LCMS conditions have been defined using these columns.
